

CASE STUDY GUIDE: PRIMARY SCHOOL (Age 8 - 11)

## **Case Study Summary**

This Case Study connects with our Lesson Plan: Whaling. It focuses on our whale defense campaigns to stop whaling in the Southern Ocean Whale Sanctuary.

This Case Study takes 20 minutes to complete.

## Subjects relevant to

English, Geography, History, Math, Science and Social Science.

# **Learning objectives**

- > Learn about whaling in Antarctica.
- > Understand why the ICJ deemed it to be commercial whaling.

## **Preparation**

- This case study has been designed to supplement our main lessons. It can be stopped at any time should you wish to include your own discussion/questions or incorporate the lesson activities.
- Depending on whether students are working in a classroom or remotely, you can choose to discuss questions in the class or use the online learning app.
- This digital lesson has an interactive option called student devices. If you choose this option ask the students to bring their mobile phones or tablets to the lesson.
- Should you choose the interactive option, it will run a quiz during the lesson. Recommendation: only use this interactive option in classes of up to 30 students.
- Students can sign up on their mobile device to the www.LessonUp.app. They will be asked
  for a PIN code (this will appear automatically on slide 3 and will also show at the bottom of
  the screen). Students who sign up under a false name may be removed by the teacher.
- Students who do not have a mobile device can join the quiz with another student.
- If student devices is turned ON, you can opt to turn the sound and the share screen ON or OFF. Further on you can choose if you want to 'show ranking after each quiz' question. Doing so will create a competitive element, but it can be distracting. Recommendation: turn the 'show ranking after each quiz' OFF.
- The abovementioned options will also show if you click on the PIN code at the bottom of the screen.

CASE STUDY GUIDE: PRIMARY SCHOOL (Age 8 - 11)

## **Lesson plan**

#### Slide 1 Introduction

This lesson is provided by Sea Shepherd. Sea Shepherd was founded in 1977 and is a marine conservation organisation working to protect the oceans and marine wildlife. Sea Shepherd works globally on a range of issues impacting the oceans, running numerous direct action campaigns each year. Whaling is one area Sea Shepherd has been working to stop.

#### Slide 2 Lesson action icons

During the lesson we will use these icons to identify the learning actions.

#### Slide 3 Operation Zero Tolerance

In 2012 - 13 Sea Shepherd undertook its 9th campaign to protect whales in the Southern Ocean from the Japanese whaling fleet. Four Sea Shepherd vessels patrolled the waters around Antarctica to find the Japanese whaling fleet and their refueling vessel.

### **Slide 4 Operation Zero Tolerance**

When the Nisshin Maru's captain became frustrated with his efforts to refuel being blocked, he pushed the Bob Barker into the refueling vessel by deliberately ramming her, as well as ramming the Steve Irwin and Sam Simon.

The Nisshin Maru is an 8,000 ton ship against our ships all less than 600 tons.

CASE STUDY GUIDE: PRIMARY SCHOOL (Age 8 - 11)

#### Slide 5 Blocking refuelling

Sea Shepherd decided to block refueling for two reasons, firstly the whalers were attempting to conduct refueling within the Sanctuary, which is illegal.

Secondly by preventing the Nisshin Maru from refuelling we could put a stop to whaling that season, because without fuel they could not continue whaling operations.

#### Slide 6 Dangerous actions

In addition to ramming Sea Shepherd vessels they also used their water cannon to try and flood the Bob Barker's engine rooms and threw concussion grenades at Sea Shepherd crews.

Concussion grenades are designed to deafen and disorient but can also burn and cause other injuries if crew take a direct hit. Not exactly a smart move to be throwing concussion grenades right next to a fuel tanker! Despite the massive damage to Sea Shepherd ships the captains would not back down.

#### Slide 7 932 whale saved

The Nisshin Maru was not able to refuel and the whaling fleet was eventually escorted out of the Sanctuary, by the Sea Shepherd vessels.

Despite their attempts to damage our ships we reduced their quota by saving 932 whales during Operation Zero Tolerance.

### Slide 8 Operation Relentless 2013-14

The following year, during Operation Relentless, the Japanese whaling harpoon ships made dangerous maneuvers across the bows of the Steve Irwin and Bob Barker while towing steel cables behind their ships. The cables were used to try and entangle and disable our propeller and thus disable the ships.

#### Slide 9 Dangerous manoeuvres

On 2 February 2014 for a period of 9 hours, the two Japanese catcher ships crossed in front of the Steve 45 times and Bob 41 times.

CASE STUDY GUIDE: PRIMARY SCHOOL (Age 8 - 11)

#### Slide 10 Dangerous manoeuvres

During this attack the captain of the Yushin Maru No.3 misjudged his distance to the Bob Barker and ended up ramming her causing damage to the ribs (or framework) of the bow. They also shone their spotlights and laser pointers at the bridges throughout the night trying to blind and disorientate Sea Shepherd crews, both illegal activities.

### Slide 11 784 whales saved

The attacks came after Sea Shepherd had located the Nisshin Maru and were undertaken specifically to distract the ships and prevent them from blocking the Nisshin. By slowing us down the Nisshin Maru was able to escape to resume whaling. Despite their desperate attempts to disable Sea Shepherd ships we still managed to stop whaling and reduce their quota by saving 784 whales during Operation Relentless.

#### Slide 12 Antarctic beauty

Despite the hard work and long hours during campaigns to protect Antarctica Sea Shepherd crews get to experience the beauty of the Antarctica region.

Show this video (1.21 min) which shows beautiful marine life and scenery from Antarctica:

## Slide 13 Operation Nemesis (2017)

In early 2017 the Steve Irwin and Ocean Warrior spent over 90 days at sea chasing the Japanese whale poachers.

Having lost the International Court of Justice case, the Japanese whalers were now operating illegally. In 2016 they had reduced the whale quota to 333 Minke whales and expanded their whaling area, making the search for the whaling fleet more difficult than previous years.

The Japanese whalers also extended the length of the whaling season, meaning they stayed in Antarctic waters longer to try to obtain their quota.

Show this video (2.37 min) which shows the evidence that the Japanese whalers were whaling after the ICJ ruling:

CASE STUDY GUIDE: PRIMARY SCHOOL (Age 8 - 11)

### **Slide 14 Tracking whalers**

This year the Japanese had access to their government's military satellites and were able to track Sea Shepherd vessels. This meant they could keep see the location of the Sea Shepherd vessels and keep out of range.

This made it impossible to track them down and stop whaling. But bad weather made life difficult for the whalers and they had to constantly move to stay away from Sea Shepherd vessels. This meant they had to extend their time at sea to try and catch their quota, costing them a lot more money.

The campaign was successful in being able to document the poachers illegally taking Minke whales in the Australian Whale Sanctuary. This is the first time that the illegal activities have been documented since the International Court of Justice ruled against their Antarctic whaling operations in 2014.

### Slide 15 Question

Ask students to complete their answers to the following question using the www.LessonUp.app or discuss in classroom.

"Why would refuelling be banned within the Southern Ocean Whale Sanctuary?"

Slide 16 Close

#### YOUR FEEDBACK

We value your feedback and would be pleased to hear your thoughts about this lesson and activities. Any comments, suggestions or requests for further information can be sent to education@seashepherdglobal.org.
